I am currently a student at the University of the People studying bachelor's degree in computer science. I have always been interested in programming. For example, I have made my personal website (with React and Express JS), made a Java Quiz application, and am making another bigger project incorporating both front end and backend (React and ASP.NET).

I have a bachelor's degree in Business Administration and I still use the knowledge for investing, after that I did another program in automation while studying for another bachelor's degree in computer science, but later I decided to pursue a career in programming because it is more creative and there are lots of stuff waiting to be learned and the demand of programmer is very high even after five years.

Programming languages I know include Java (I used Java swing for my Quiz application), C# (from Arduino programming and ASP.NET), SQL (MySQL for Java Quiz application and MS SQL for my ongoing project), JavaScript (React and Express for my personal website) and HTML and CSS, MATLAB (I did a robot arm draw portrait project based on it). And I used Eclipse for Java and Visual Studio for web development.

I think I would be suitable for the company to:

1. I have a strong ability to solve problems. When I encounter an intractable problem, I don't want to compromise until I solve it.

For example, I wanted to make a new webpage, but it requires many backend operations so I chose ASP.NET. Because the Razor code was completely new to me, and I think the best way to learn is to do it hand on, so I searched online how to do it and followed the instruction, and did some customizations (like adding two columns to the Identity registration packet), I had some problem not show on the instruction, it took some time but eventually, I figured out by using Stack Overflow and watch YouTube.

2. I am a person who works well in groups, I have many experiences in project work where I have collaborated with many different people (as part of my bachelor's degree at Jönköping University, where we had a lot of group work in all courses), and I know how I will work with other people to get the job done.

For example, I worked on a project with three other people where we visited a company and where the project focused on marketing and how we could improve it, although we encountered some difficulties and didn't always agree, we could solve it together and present a report to the company that they were very happy about.

3. I continue to do my best. For example, in my bachelor's degree where I sometimes faced many difficulties, I managed to complete all the courses and graduated within the course duration.

4. I always complete my assignments very quickly and always before the due date.

I look forward to an interview with you.
